

Manifestoberta Performance Report

Sentence Version 2024a (56Topics)

2024-07-31

Summary

- Performance was measured on 203 manifestos, which represent 200920 annotated quasi-sentences
- Overall the model manages to assign the correct category to quasi-sentences in the test data set with an accuracy of 57.12%. In 73.48% of the cases, the true category is among the two most confident predictions of the model, and in 81.07% among the top three. (Table 1)
- Lower macro averaged F1, Precision, and Recall reflect problems with some individual categories, especially rare/exotic categories like 102, 409, or 702 (Table 1 and Table 2)
- The overall distribution and frequency of individual category predictions isn't as closely aligned with the true distribution of categories as they are in our context model. The model is over and under predicting some codes (Table 2)
- The model performs in a acceptable range across all countries/languages present in the test data set, with the lowest accuracy value of 46.07% in Mexico (Table 3).
- Probability estimates of the model are well calibrated and properly reflect the likelihood of a right prediction. If the model reports a confidence of 95% or higher (which happened for 6.76% of all quasi-sentences in our test set) it was, in fact, right in 95.54% of those cases. (Table 4)
- True rile values and rile values calculated based on model predictions are rather strongly correlated (Plot 1).

Usage Recommendations

As the model performs worse than the context model version yet is easier to apply, it is primarily intended for small ad-hoc analyses and prototyping. Generally, we recommend using the more capable context model for more robust and reliable results.

Results

accuracy	0.57
top2_acc	0.73
top3_acc	0.81
precision	0.48
recall	0.43
f1macro	0.45
mcc	0.55
cross-entropy	1.47
